CALIBRATION

Valid To: April 30, 2024

Certificate Number: 2681.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations^{1, 10}:

I. Electrical – DC/Low Frequency

¹ This laboratory offers commercial calibration service.

² Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of $k = 2$. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer’s device and to influences from the circumstances of the specific calibration.

³ Based on using the Fluke 8508A at the temperature (TCal) it was calibrated $\pm 5\text{ }^{\circ}\text{C}$, 4 Hr. warm up, maximum resolution and an input zero or offset null performed if temp moves more than $\pm 1\text{ }^{\circ}\text{C}$ from temperature at which previous input zero or null was performed. Calibration and Measurement Capability is based upon 1-year specifications and is read as parts in 106 or percent of reading plus parts in 106 or percent of range. TCal = $23\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$ ($73.4\text{ }^{\circ}\text{F} \pm 9\text{ }^{\circ}\text{F}$).

⁴ Based on using the Fluke 5790A/B at the temperature (TCal) it was calibrated $\pm 5\text{ }^{\circ}\text{C}$ with 30 minutes warm up. Calibration and Measurement Capability is based upon 1-year specifications and is read as parts in 106 or percent of reading plus fixed amount. TCal = $23\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$ ($73.4\text{ }^{\circ}\text{F} \pm 9\text{ }^{\circ}\text{F}$).

⁵ Transition time characteristic calculated from $T = 0.35 / \text{Bandwidth}$ (26.5 GHz).

⁶ In a statement of CMC, percentage refers to percent of reading, unless otherwise noted. In the statement of CMC, W is defined as the watt reading, “rms” refers to root mean square.

⁷ The contributions from the “best existing device” are not included in the CMC claim.

- ⁸ The measurands stated are generated using the indicated instrument (see Comments). This capability is suitable for the calibration of the devices intended to measure the measurand in the ranges indicated. CMCs are expressed as either a specific value that covers the full range or as a fraction of the reading plus a fixed floor specification.
- ⁹ The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances. The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.

Accredited Laboratory

A2LA has accredited

TRS-RENTELCO

DFW Airport, TX

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets the requirements of ANSI/NCSL Z540-1-1994 and the requirements of ANSI/NCSL Z540.3-2006 and R205 – *Specific Requirements: Calibration Laboratory Accreditation Program*.

This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 24th day of May 2022.

A blue ink signature of the Vice President of Accreditation Services.
