CALIBRATION

Valid To: August 31, 2026

Certificate Number: 2146.01

In recognition of the successful completion of the A2LA evaluation process, (including an assessment of the organization's compliance with R205 – A2LA's Calibration Program Requirements) accreditation is granted to this laboratory to perform the following calibrations^{1,4}:

I. Electrical – DC/Low Frequency

Parameter/Equipment	Range	CMC ² (±)	Comments
Electrical Simulation of Thermocouple Indicating Systems ³ – Type J Type K Type T	(-210 to 1200) °C (-190 to 1371) °C (-200 to 400) °C	1.5 °C 1.7 °C 1.2 °C	QSI-003: multi-function calibrator
Electrical Simulation of RTD Indicating Systems ³	(-195 to 815) °C	0.59 °C	QSI-003: multi-function calibrator

II. Thermodynamics

Parameter/Equipment	Range	CMC ² (±)	Comments
Temperature Chambers/Ovens ^{3,5} – System Accuracy	(0 to 90) °C	0.49 °C	QSI-001: Vaisala HM70 w/ HMP-77 probe

Parameter/Equipment	Range	CMC ² (±)	Comments
Temperature Chambers/Ovens ^{3,5} – System Accuracy (cont)	(-80 to 200) °C	2.1 °C	QSI-001: Multifunction calibrator w/ type T thermocouple
	(-80 to 200) °C	1.6 °C	Multifunction calibrator w/ RTD probe
	(200 to 1150) °C	3.4 °C	Multifunction calibrator w/ type K thermocouple
Relative Humidity – Chambers ^{3,5} – System Accuracy	(10 to 95) % RH @ Up to 40 °C	2.2 % RH	QSI-004: Vaisala HM-70 w/ HMP-humidity probe
	(10 to 95) % RH @ (40 to 85) °C	3.5 % RH	

¹ This laboratory offers commercial field calibration service.

² Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of $k = 2$. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

³ Field calibration service is available for this calibration. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.

⁴ This scope meets A2LA's *P112 Flexible Scope Policy*.

⁵ Air temperature and/or humidity are measured in an empty working-volume (chamber), except for customer fixtures and cable.

Accredited Laboratory

A2LA has accredited

1943072 ONTARIO LTD., OA CASCADE MECHANICAL SERVICES

Etobicoke, Ontario, CANADA

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 General requirements for the competence of testing and calibration laboratories. This laboratory also meets R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 6th day of January 2025.

A handwritten signature in blue ink, appearing to read "Trace McInturff".

Mr. Trace McInturff, Vice President, Accreditation Services
For the Accreditation Council
Certificate Number 2146.01
Valid to August 31, 2026

For the calibrations to which this accreditation applies, please refer to the laboratory's Calibration Scope of Accreditation.
