CALIBRATION

Valid To: September 30, 2026 Certificate Number: 4968.01

In recognition of the successful completion of the A2LA evaluation process (including an assessment of the organization's compliance with A2LA's Calibration Program Requirements), accreditation is granted to this laboratory to perform the following calibrations[1, 8:]

I. Chemical

Parameter/Equipment	Range	CMC[2, 9] (±)	Comments[4]
pH[3] – Measuring Equipment	(2, 4, 7, 10, 12) pH	0.04 pH	Standard solution
pH[3] – Electrical Simulation	(0 ≤ pH ≤ 14) pH	0.01 pH	Electrical calibrator
Conductivity[3] – Measuring Equipment	10 µS/cm 84 µS/cm 100 µS/cm 1000 µS/cm 1413 µS/cm 10000 µS/cm 100000 µS/cm	0.27 µS/cm 1.4 µS/cm 1.5 µS/cm 13 µS/cm 18 µS/cm 0.21 mS/cm 1.3 mS/cm	Standard solution
Conductivity[3] – Electrical Simulation	(0.1≤ C ≤ 100000) µS/cm	0.3 % + 0.0012 µS/cm	Electrical calibrator
Conductivity[3] – Measure	(0.1 < C ≤ 10000) µS/cm	0.8 % + 0.011 µS/cm	Conductivity meter

[1] This laboratory offers commercial calibration and field calibration services.

[2] Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCsrepresent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of $k = 2$. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

[3] Field calibration service is available for this calibration and this laboratory meets A2LA *R104 – General Requirements: Accreditation of Field Testing and Field Calibration Laboratories* for these calibrations. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.

[4] Calibration can be also performed to manufacturer or specific customer requirements

[5] LSVD represents the least significant valid displayed division of the device subject to calibration

[6] Analytical balance is a balance with one LSVD less of 0.001 gram.

[7] In the statement of the range, *P* is pressure, *m* is mass, *T* is temperature, *H* is humidity, *t* is time, ω is rotation, *L* is length, *C* is conductivity, *pH* is pH.

[8] This scope meets A2LA's *P112 Flexible Scope Policy.*

[9] The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.

[10] Calibration by means of substitution method.

[11] Without testing of flatness of anvils.

Accredited Laboratory

A2LA has accredited

SCALAR LABORATORIES LTD

Azor, ISRAEL

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (*refer to joint ISO-ILAC-IAF Communiqué dated April 2017*).
