**CALIBRATION**

Valid To: November 30, 2024

Certificate Number: 1995.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations<sup>1, 11</sup>:

I. Dimensional

Parameter/Equipment	Range	CMC <sup>2, 7</sup> ( $\pm$ )	Comments
Gage Blocks	Up to 1 in (1 to 4) in (4 to 20) in	(3 + 4L) $\mu$ in (2 + 4L) $\mu$ in (6 + 3L) $\mu$ in	By mechanical comparison with gage blocks standards
Length Standards <sup>3, 9</sup>	Up to 24 in (24 to 80) in	(20 + 5L) $\mu$ in (50 + 6L) $\mu$ in	P&W 80 in LMM, Supermic <sup>TM</sup> , gage blocks
Bore Gages <sup>3, 9</sup>	Up to 5 in	0.000 40 in	Master ring gages
Micrometers <sup>3, 9</sup>	Up to 1 in (1 to 80) in	(70 + 2L) $\mu$ in (70 + 3L) $\mu$ in	Gage blocks
Calipers <sup>3, 9</sup>	Up to 60 in	(600 + 8L) $\mu$ in	Gage blocks
Length Indicators <sup>3, 9</sup>	Up to 8 in	(60 + 60L) $\mu$ in	Gage blocks & granite plate

Parameter/Equipment	Range	CMC <sup>2, 7</sup> ( $\pm$ )	Comments
Ruled Standards <sup>3, 9</sup> –			
Steel Rules	Up to 60 in	(400 + 200L) $\mu$ in	Precision rule & microscope
Steel Tape	Up to 100 ft	0.016 in	Precision rule, microscope, standard tape
Plain Ring Gages <sup>9</sup>	(0.06 to 5) in	(10 + 9L) $\mu$ in	ULM & master rings
Plain Plug & Pin Gages <sup>3, 9</sup>	Up to 12 in	(80 + 15L) $\mu$ in	ULM & gage blocks
Thread Plug Gages –			
Major Diameter <sup>9</sup>	Up to 5 in	68 $\mu$ in	ULM & gage blocks
Pitch Diameter <sup>9</sup>	(4 to 80) pitch	63 $\mu$ in	Thread wires
Coating Thickness Gages <sup>3, 9</sup>	Up to 60 mils	(0.071 + 0.0061L) mils	Coating thickness standards
Ultrasonic Thickness Gages <sup>3, 9</sup>	Up to 1 in	0.000 59 in	Step block standards
Height Gages <sup>3</sup>	Up to 24 in	(50 + 8L) $\mu$ in	Gage blocks & surface plate
Surface Roughness Gauges <sup>3, 9</sup>	Ra 18.9 $\mu$ in Ra 119.5 $\mu$ in	2.4 $\mu$ in 2.4 $\mu$ in	Surface roughness specimens

## II. Electrical – DC/Low Frequency

Parameter/Equipment	Range	CMC <sup>2, 4, 6, 10</sup> ( $\pm$ )	Comments
DC Voltage – Generate <sup>3, 9</sup>	Up to 220 mV 220 mV to 2.2 V (2.2 to 11) V (11 to 22) V (22 to 220) V (220 to 1100) V	14 $\mu$ V/V + 0.4 $\mu$ V 6.6 $\mu$ V/V + 0.7 $\mu$ V 4.4 $\mu$ V/V + 2.5 $\mu$ V 4.4 $\mu$ V/V + 4 $\mu$ V 6.4 $\mu$ V/V + 40 $\mu$ V 9.3 $\mu$ V/V + 400 $\mu$ V	Fluke 5720A calibrator

## V. Time & Frequency

Parameter/Equipment	Range	CMC <sup>2, 10</sup> ( $\pm$ )	Comments
Frequency – Measure <sup>3, 9</sup>	0.1 Hz to 2.7 GHz	1.8 parts in $10^8$	Fluke PM6681
Time Interval – Timers & Stop Watches <sup>3, 9</sup>			NIST SP 960-12
Time Base <sup>8</sup>	(0 to 24) hours	0.06 s/day	Helmut Klein 4500 Timometer
Totalize Method	(0 to 24) hours	0.12 s	Fluke PM6681, function generator

<sup>1</sup> This laboratory offers commercial calibration service and field calibration services.

<sup>2</sup> Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal Generate. Calibration and Measurement Capabilities represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of  $k = 2$ . The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

<sup>3</sup> This laboratory performs field calibration activities for these parameters. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC. Field environmental conditions are limited to 15 °C to 30 °C and <80% relative humidity to 30 °C.

<sup>4</sup> Fluke 5700A and 5500A CMCs are based upon the temperature the standard was calibrated ( $t_{cal} \pm 5$  °C) and assuming the instrument is zeroed at least every seven days or when the ambient temperature changes more than 5 °C. For Resistance, a zero calibration is performed at least every 12 hours within  $\pm 1$  °C of use. For AC Current, best uncertainties are determined with the LCOMP off. CMCs are also based upon 1-year floor specifications. CMCs are expressed as either a specific value that covers the full range or as a fraction/percentage of the reading plus a fixed floor specification.

<sup>5</sup> Agilent 3458A CMCs are based upon the temperature the standard was calibrated ( $t_{cal} \pm 5$  °C) and an auto calibration (ACAL) was performed within the previous 24 hours ( $\pm 1$  °C of ambient temperature.) CMCs are also based upon 1-year floor specifications. CMCs are expressed as either a specific value that covers the full range or as a combination of the fraction/percentage of the reading/output plus a range specification.

<sup>6</sup> In the statement of CMC, percentages are percentages of reading, unless otherwise indicated.

<sup>7</sup> In the statement of CMC,  $L$  is the numerical value of the nominal length in inches.

<sup>8</sup> Applicable when the internal time base (oscillator) of the device under test is/can be measured directly by the frequency counter.

<sup>9</sup> This laboratory may perform field calibration activities for these parameters with their Mobile Laboratory.

<sup>10</sup> The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.

<sup>11</sup> This scope meets A2LA's *P112 Flexible Scope Policy*.

# Accredited Laboratory

A2LA has accredited

**JM TEST SYSTEMS, LLC.**

Baton Rouge, LA

for technical competence in the field of

**Calibration**

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 General requirements for the competence of testing and calibration laboratories. This laboratory also meets the requirements of ANSI/NCSL Z540-1-1994 and R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 16<sup>th</sup> day of December 2022.

A blue ink signature of a person's name, appearing to read "John Doe".

Vice President, Accreditation Services  
For the Accreditation Council  
Certificate Number 1995.01  
Valid to November 30, 2024  
Revised February 29, 2024

For the calibrations to which this accreditation applies, please refer to the laboratory's Calibration Scope of Accreditation.
